Specifically, the applicants request that the Commission grant them a temporary variance to continue the 144 cubic feet per second release from the existing bypass conduits until the applicants complete the spillway refurbishment project. The ongoing refurbishment project necessitates vehicular access to the spillway apron and releasing the required continuous flows from the spillway gates, as proposed in their Spillway Flow Release Plan would prevent the vehicular access. The applicants expect to complete the work by October 31, 2016, but state that they would implement the targeted continuous flows immediately if they are able to complete construction sooner.
